

Flood Awareness
Better Served!

FLOOD-serv

FLOOD Emergency
and Awareness **SERVICE**

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 693599

FLOOD-serv (Public FLOOD Emergency and Awareness SERVICE), is a project that aims to provide a complete solution for flood awareness, response actions as well as education regarding flood risks. Through the use of different mobile technologies, the project will make available information in a transparent manner in order to increase the openness of ICT-based technology platforms in the public sector.

An Emergency Management Console will gather all available information from social media, visualize emergency status through geomapping and track actions to be executed.

A pro-active and personalized citizen-centric public service tool to empower local community involvement in the design of flood relief actions.
