

Flood Awareness  
Better Served!

# FLOOD-serv

Public FLOOD Emergency  
and Awareness SERVICE

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 693599

FLOOD-serv project creates a system that offers **timely alerting** to its end users before any type of flood event occurs, **analysis** of the crisis situation and **proposes** appropriate response to fight against it. It also provides flood events reports and access to data from various outside sources such as **meteorological** and **hydrological** data. In addition the system involves **citizens** in the process of flood management by providing them a portal where they **can submit** messages to the relevant authorities.

The system will deliver its services to the end users via a **web portal** and a **mobile application**.

The consortium has already completed two phases of testing and evaluating the FLOOD-serv system in the pilot sites while the final one will be accomplished by the end of April 2019.

**Pilots:** Genova (Italy), Danube Delta (Romania), Bilbao (Spain), Bratislava (Slovakia), Ave Valley Region (Portugal).
